

The ideal candidate should have expertise in the areas of **Power, Energy, and Thermal Systems**, as these are critical to strengthening our academic and research capabilities.

In addition to their technical specialization, the candidate should possess **excellent English language proficiency** and demonstrate a proven track record of teaching a **broad range of courses in Mechanical Engineering**. This will ensure they can contribute effectively to our curriculum and mentor students across diverse topics within the discipline.

Furthermore, it would be highly advantageous if the candidate **has experience in accreditation processes**, as this will support our ongoing efforts to maintain and enhance program standards.

Additionally, **knowledge or experience in Robotics Engineering** would be a significant plus, as it aligns with emerging trends and expands our department's expertise.

We believe that bringing in a highly qualified faculty member with these qualifications will significantly enhance our program's quality and align with our strategic goals of academic excellence and innovation.
